1. Claims 1-14 and 21-50 are allowed.
2. The following is an examiner's statement of reasons for allowance: claims 15-20, which were rejected in the previous office action, have been cancelled. A recording medium having recorded a coding program having a computer converting a sequence of m-bit information words into a sequence of n-bit code words, the program including, the steps of: generating a first information sequence by inserting first DC control bits into an input information sequence at predetermined intervals and a second information sequence by inserting second DC control bits different from the first DC control bits into the input information sequence at the predetermined intervals; generating a first provisional code sequence by making a code conversion of the first information sequence generated in the information sequence generating step at a conversion ratio of an information word length m to an code word length 4, generating a second provisional code sequence by making a code conversion of the second information sequence generated in the information sequence generating step at the conversion ratio of the information word length m to the code word length 4, and selecting either the first provisional code sequence generated in the first code converting step or the second provisional code sequence generated in the second code converting step, has not been shown in the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Noda et al disclose data encoding method of converting an L-bit data word into an α .L-bit code word, comprising: dividing said L-bit data word into an M-bit data word and an N-bit data word ($M \geq N$); converting said M-bit data word into a β .M-bit code word whose pattern is based on the content created by combining said M-bit data word with said N-bit data word by reference to a first conversion table; converting said N-bit data word into a γ .N-bit code word whose pattern is based on the content created by combining said M-bit data word with said N-bit data word by reference to a second conversion table; and connecting said β .M-bit code word to said γ .N-bit code word to convert into said α .L-bit code word.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian Young whose telephone number is 571-272-1816. The examiner can normally be reached on Mon-Fri 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mike Tokar can be reached on 571-272-1812. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
